DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/16/10 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 3-9, 11-23, and 25-35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In claims 1, 25, 32, 33, and 35, the limitation "the displacements of the vibrator are not transmitted to the ultrasound probe" is not described in the specification in such a way as to enable one skilled in the art to make or use the invention. The specification for example only appears to recite on page 4, that "the probe and vibrator are advantageously arranged so that the displacement of

the vibrator along the axis x for generating the shear wave is not transmitted to the probe". This limitation is not discussed anywhere in the detailed description section, or anywhere else in the specification. Thus, it is unclear what this "advantageous arrangement" is which allows for the displacements of the vibrator to not be transmitted to the ultrasound probe. It is unclear if there is some structural element or arrangement which prevents the vibrations from being transmitted to the probe.

Furthermore, as both the vibrator and the ultrasound probe are connected to one another via the housing, it would seem that at least some vibrations from the vibrator would travel through the housing and be transmitted to the probe. It is unclear how these vibrations can be prevented from being transmitted through the housing to the probe.

Response to Arguments

Applicant's arguments with respect to claims 1, 3-9, 11-23, and 25-35 have been considered but are moot in view of the new ground(s) of rejection.
